## Summary of Information

The target is currently located at 27 40 S 81 55 W. The vessel is setting dangerously low in the water as if it had been overloaded. The seas are becoming heavier and the vessel is barely "keeping its nose above water" right now. There are portions of the vessel which are missing; in other words, the integrity of the vessel is incomplete. There was a small fire with an associated smell of ozone nearby. It was caused by a piece of metal which was thumping/hitting against a group of curving tube-shaped objects. The fire itself was small and did not spread vessel-wide. However, this fire is linked to the current condition of the vessel. It can move forward but is drifting to the side, causing its course to be at an angle rather than straight ahead. It will not be able to maneuver at all if the seas become any heavier. There are 7 or 8 individuals on board. However, several of them seem distant or in a daze. One individual on the bridge is staring unfocused out towards the forward horizon. Two other individuals are sitting on the floor leaning against the wall. They also seem "incomplete". There are gaps not only throughout the ship but also within the people.
